

MARYSA[®] PA6UNIBO*

Tree

High vigour with intermediate canopy, good branching, standard bearing habit.

Production mainly on the shoots and flowering buds at the base of the one-year old branches.

Flowering time

Early, usually 3-4 days before Burlat. Self-compatible; allelic profile: S3S4'; incompatibility group SC/O (self-fertile and universal pollinator).

Time of maturity

Medium early and uniform; harvesting starts 10 to 12 days after Burlat depending on the year in the Vignola area; harvesting window of around 10 days.

Fruit

Large size (dominant calibre: 28mm; average weight 11-12g), cordiform, symmetrical, attractive. Medium-thin skin, purple-red shiny colour (scale 4 CTIFL code) covering the whole surface, tending to dark red and shiny when fully ripe (scale 6 CTIFL code). Surface suture line. Pink flesh with an excellent consistency, fleshy, juicy and very aromatic, good quality, sweet with a high acidity content. Long stalk, intermediate thickness. Medium sized freestone pit.
